600 Questions on 200 Cards, 90 Chips
(15 of Each Color), 6 Exclusion Cards, Game Board,
2 Answer Chips

Object
Know (or guess correctly) how other players will
answer questions, and “bet” your Chips wisely to
be the last player standing!

Set Up
• Each player chooses a color and takes those Chips.
• Each player takes one Exclusion Card (red cards).
• Place the Game Board in the middle of the
playing area.
• Place the Cards in a pile face down so everyone
can reach them, as well as the two Answer Chips
(true/false chips).

Play
• The naughtiest player goes first (you know who you
are). Take a Card and the Answer Chips.
• The reader chooses one of the three questions
from the Card and reads it aloud. Some are naughty,
some are not... you pick!
• The reader then truthfully answers the question by
secretly choosing one of the Answer Chips to set
face down, as their answer.
• Now all other players decide how they think the reader
answered the question. Place all of your Chips on the True and False sides of the Game
Board. You decide how many to put on which side.
For example, if you’re confident how the reader
answered, you may put the majority or all of your
Chips on one side. If you’re not sure, you may want
to split your Chips more evenly between the two
dsides. You must place ALL of your Chips on one
or both of the sides. “You gotta be All In... get it?
• After the Chips are placed on the Game Board, the
reader reveals the answer by flipping over the
Answer Chip. All Chips on the correct side of the
Game Board are taken back by players, and all
Chips on the incorrect side are now out of play.
Hopefully you bet wisely or guessed well!
• Play continues clockwise with players taking turns
with questions.
• Exclusion Cards: The reader may play an
Exclusion Card on any question. The Exclusion
Card allows the reader to exclude one player from
participating on that question. The reader may want
to use an Exclusion Card if they think a certain
player will be able to easily answer their question
and possibly influence others (like a partner...or
partner in crime!). If a player is excluded, they
cannot participate in that round.

Winning
When only one player has a Chip(s) left in play,
the game ends and that player wins! Woohoo!

Note: If a player is eliminated before the game
ends, they may still participate as question readers.
’Cuz it’s fun!

Note: If it happens that there is no one winner
because two or more players get eliminated at the
same time, the READER is the winner!

Semantics, Shmometrics
We don’t want you to take all of the statements too
literally, guys. “I have peed my pants” could be
answered TRUE by pretty much everyone because
we all wet ourselves as babies. But you know that’s
not what we mean!
